PROFESSIONAL SUMMARY

Mobile Engineer and Technical Lead with over 10 years of experience building software, including 9+ years focused on React Native and TypeScript apps for iOS and Android, starting from a native iOS background. I spend most of my time designing clean mobile architectures, setting up reliable state management and offline data sync, and building shared UI component libraries across teams. Over the years, I have shipped and maintained production apps used by over 1M people across healthcare, industrial IoT, retail, and sports. I care deeply about practical app performance—keeping frame rates smooth at 60/120 FPS, cutting startup times, writing automated tests in Jest and Detox, and keeping release pipelines running smoothly while mentoring junior and mid-level developers.

CORE TECHNICAL SKILLS & COMPETENCIES

Mobile & React Native	React Native (CLI & Expo), TypeScript, JavaScript (ES6+), New Architecture (Turbo Modules, Fabric, JSI, Bridgeless Mode), Hermes, React Navigation, Deep Linking, Reusable UI Component Libraries
APIs, Data & Persistence	RESTful APIs, WebSockets, Offline-First Data Sync, SQLite, CoreData, Encrypted Local Storage, Axios, JSON, Basic GraphQL
Architecture & State	Modular Mobile Architecture, Clean Architecture, State Management, Redux, Redux Toolkit, Redux Saga, Zustand, MobX, Context API
Performance & Native iOS/Android	Startup & Memory Profiling, 60/120 FPS Rendering, Xcode Instruments, Android Studio Profiler, Swift, SwiftUI, UIKit, Objective-C, Kotlin, Java, CoreBluetooth (BLE), HealthKit, CoreMotion, watchOS
Testing & Code Quality	Jest, Unit & Integration Testing, Detox (End-to-End Testing), SonarQube, Code Reviews, Clean Code Practices
CI/CD, Releases & Monitoring	App Store & Google Play Releases, Fastlane, GitHub Actions, EAS, CodePush / OTA Updates, Firebase (Crashlytics, Analytics, FCM), BigQuery Crash Reporting
Backend & AI Tooling	Node.js, Python (FastAPI, Celery), PostgreSQL, Redis, React.js, Angular; Google Gemini API, MedGemma, Multi-Agent Workflows, Google ML Kit; Cursor, Claude Code, GitHub Copilot

PROFESSIONAL EXPERIENCE

Eventtan Pvt. Ltd. — Senior React Native Engineer & Technical Lead May 2017 – October 2026 | Ahmedabad, India

- Architected and maintained cross-platform mobile apps in React Native and TypeScript for iOS and Android across healthcare, industrial IoT, retail, and sports products reaching over 1M users combined.
- Built shared UI component libraries, custom hooks, and deep-linking navigation flows in React Navigation so product teams could ship features consistently on both platforms.
- Designed client networking and offline-first data layers using REST APIs, WebSockets, Redux Toolkit, and local SQLite storage with request caching, pagination, and background sync queues.
- Worked closely with backend teams to define clear API contracts and payload structures, and contributed directly to supporting Python FastAPI services using Pydantic, Celery, and Redis.
- Tracked down memory leaks, UI thread freezes, and unnecessary re-renders using Xcode Instruments and Android Studio Profiler, tuning Hermes builds to keep scrolling and animations smooth at 60/120 FPS.
- Migrated core modules to the React Native New Architecture, writing custom Turbo Modules and native bridges in Swift, SwiftUI, and Kotlin over JSI for low-latency Bluetooth (BLE), camera, and hardware sensor access.
- Set up unit, integration, and end-to-end test suites using Jest, Detox, and SonarQube, and ran regular code reviews to catch regressions before release.
- Monitored production stability through Firebase Crashlytics and built an automated Google Apps Script + BigQuery report to group crash trends and speed up hotfix turnarounds.
- Managed App Store and Google Play submissions and automated build and release workflows using Fastlane, GitHub Actions, EAS, and CodePush OTA updates.
- Mentored mobile engineers on architecture and debugging, introduced practical AI-assisted coding workflows (Cursor, Claude Code) for refactoring and test writing, and helped plan sprint deliveries.

KBA Systems — iOS Developer June 2016 – April 2017 | Ahmedabad, India

- Built and shipped 4 native iOS apps from scratch using Swift, Objective-C, and UIKit, including a QR scanner, a background voice recorder, and an enterprise fax utility following Apple Human Interface Guidelines.
- Implemented background audio recording with CoreAudio and local data storage using CoreData and SQLite so apps worked reliably without an internet connection.
- Integrated Firebase Crashlytics, Analytics, and Cloud Messaging (FCM) to track app health and handle push notifications in production.

SELECTED MOBILE PROJECTS (REACT NATIVE & NATIVE IOS/ANDROID)

Project & Domain	Core Technologies	Architecture & Engineering Highlights
PepIris (PepsiCo) Retail Shelf Audit App	React Native, TypeScript, REST APIs, Vision Camera, Google ML Kit, OpenCV	Field auditing app used to scan retail shelves for beverage and snack products. Built custom camera capture flows, on-device ML image recognition, local caching, and offline data sync for stores with weak connectivity.
DEMA Connect Industrial IoT Configuration	React Native, Redux, Swift & Kotlin Native Modules, CoreBluetooth (BLE), WebSockets	Mobile app for configuring and diagnosing commercial chemical dispensers and industrial washing machines. Wrote native Swift and Kotlin BLE bridges, live WebSocket telemetry views, and automatic connection recovery.
eResearch Clinical Research Platform	React Native, TypeScript, Redux Toolkit, Encrypted SQLite, Biometrics, REST APIs	Participant app for remote clinical trials featuring dynamic survey forms and long-term symptom tracking. Built to meet HIPAA requirements with encrypted SQLite storage, biometric login, and audit logging.
Invitem Group Coordination & Events	React Native, Custom UI Library, WebSockets, Google & Apple Calendar APIs, Stripe	Event planning and team coordination app for sports clubs with live chat over WebSockets, two-way Google and Apple calendar sync, and Stripe checkout flows.
TruRep Athletic Motion Trainer	Swift, SwiftUI, watchOS, CoreMotion, HealthKit, Haptics	Native iOS and Apple Watch app that reads live accelerometer and gyroscope data during basketball drills to give instant haptic feedback and save workout history to HealthKit.

DEVELOPER PRODUCTIVITY, OPEN SOURCE & ADDITIONAL ENGINEERING PROJECTS

- **Open Source (npm):** Published *RNBoilerPlate* (a ready-to-use React Native starter template with modular folder structure, navigation, state management, and testing pre-configured) and *react-native-klipy* on npm.
- **ComicAI:** Built a React and Python FastAPI tool that turns comic PDFs into animated video clips using OpenCV for panel detection, generative video models, and FFmpeg.
- **AI Sports Scheduler:** Created an Angular and FastAPI tournament scheduling app using Google OR-Tools (CP-SAT solver) to assign venues, referees, and rest days automatically with live WebSocket updates.

EDUCATION

Degree	Institution & University	Duration
Master of Computer Applications (MCA)	RB Institute of Management & Computer Studies, Gujarat Technological University, Ahmedabad	2014 – 2016
Bachelor of Computer Applications (BCA)	Navgujarat College of Computer Applications, Gujarat University, Ahmedabad	2011 – 2014

CERTIFICATIONS

AI Healthcare Disease Prediction (Multi-Agent AI Project Certification) — MedGemma, NCBI, Gemini API, Python, Celery & Redis
Built and certified a multi-agent healthcare disease prediction project that evaluates patient symptoms, age, and symptom duration using MedGemma, the NCBI medical knowledge base, and Google Gemini API with Python, Celery, and Redis background workers.

AI Tools & Generative AI Certification — Be10x
Hands-on certification in practical Generative AI workflows, prompt engineering, and daily development productivity using Cursor, Claude Code, and GitHub Copilot.
